Acknowledgment	v
Abstract	vii
Zusammenfassung	ix
1 Introduction	1
2 Inhomogeneous Electron Gas	5
2.1 Introduction	5
2.2 The Born-Oppenheimer Approximation	6
2.2.1 Full Many-Body Problem	6
2.2.2 Approximation	8
2.2.3 Solution	9
2.3 The Hartree Approximation	11
2.4 Summary	14
3 Band Structure Effects	17
3.1 Introduction	17
3.2 Infinite Crystal (Bulk)	18
3.3 Methods	21
3.4 Nanostructures	24
3.4.1 Overview	24
3.4.2 Wire	25

3.4.3	Well	31
3.4.4	Computational Remarks	32
3.5	Effective Mass Approximation	36
3.6	Limitations of the EMA	41
3.6.1	Overview	41
3.6.2	Optical Lattice	41
3.6.3	Silicon Nanowire	46
3.6.4	Silicon Quantum Well	54
3.7	Nonparabolicity	58
3.8	Calculation of Charge Densities	62
3.8.1	Ideal Semiconductors	62
3.8.2	Doped Semiconductors	66
3.9	Summary	69
4	Simulation of Ballistic Transport	71
4.1	Introduction	71
4.2	Devices	72
4.3	Landauer-Büttiker Formalism	74
4.4	SIMNAD	78
4.5	Scattering Matrix Formalism	79
4.6	Discretization	86
4.6.1	Fundamental Equations	86
4.6.2	Box Integration Method	87
4.6.3	Finite Element Method	90
4.7	Self-Consistency	96
4.7.1	Main Difficulties	96
4.7.2	Kerker Mixing	96
4.7.3	Predictor-Corrector Method	98
4.7.4	Solution of the Non-Linear Poisson Equation	99
4.7.5	Simulation Flow	101
4.7.6	Initial Guess	101
4.7.7	Computation of the Injected Charge Density	103
4.7.8	Implementation	104
4.8	Inclusion of Nonparabolicity	105
4.9	Simulation results	107

4.9.1	Overview	107
4.9.2	Results for Nanowire FETs	109
4.9.3	Results for Planar FETs	117
4.10	Summary	122
5	Comparison with Tight-Binding	123
5.1	Introduction	123
5.2	Extraction of α	124
5.3	Simulation Results	130
5.4	Summary	136
6	Inclusion of Scattering	137
6.1	Introduction	137
6.2	A Short Survey on NEGF	138
6.2.1	Steady-State Quantum Transport Equations	138
6.2.2	Coupled-Mode Expansion	138
6.2.3	Electron-Phonon Scattering	139
6.2.4	Calculation of Density and Current	141
6.3	Simulation Results	141
6.4	Summary	147
7	Concluding Remarks	149
A	Band Structure Calculations	153
A.0.1	Empirical Tight-Binding Method	153
A.0.2	Empirical Pseudopotential Method	157
B	Density of States	163
C	Finite Element Method	167
D	SMA for Arbitrary Directions	171
	Bibliography	175
	Curriculum Vitae	191
